

BHARAT FORGE LIMITED

Analyst Update - FY 2020 Results

BFL 12 MONTH REPORT

“The unprecedented events over the past few months and the subsequent lockdown has completely reversed the positive momentum we had started witnessing across some of our key verticals especially in India. On the heels of robust growth over past 3 years, a routine cyclical correction in CV markets in US and Europe was forecasted for CY 2020. This was further accentuated with the Covid lockdowns from early March 2020.

The full year performance, especially H2 was impacted by the severe slump across sectors in India & globally as well. Despite the weak operating performance, we have continued to maintain a strong balance sheet which will further strengthen going forward.

All our facilities in India and globally have resumed operations in a phased manner since early May 2020, however, with utilization at sub-optimal levels. We continue to support our customers demand globally while also ensuring the safety and well-being of our employees.

FY21 has started on a difficult note with the lockdown impacting demand. Automotive production across Commercial & Passenger Vehicles Globally have been severely impacted. However, we expect the PV business to outperform underlying markets. We expect to see good demand traction in several industrial segments barring Oil & Gas sector. We are hopeful that sequentially things will start to improve from H2 FY21, as economies open up & stabilize. Although the current scenario is very different from what we have ever seen before, we are very confident that the company will come out from these difficult times stronger than before.

Throughout FY21, the company will concentrate efforts on being nimble yet addressing dynamic demands of our customers, but, with a razor sharp focus on **Cash, Cash flow, winning new business and structural cost optimization across, both - fixed and variable costs**. The cost optimization initiatives are over and above the steps taken in FY20, benefit of which will be visible from Q2 FY21 onwards. We have used the lockdown to accelerate the process of digitalization across the plant which will result in sharp productivity improvement as we get back to normal production levels.

Over the past few years, the company invested over Rs 1,300 Crores in setting up new capacities across forging and machining. Our focus will be on filling up these capacities and generate Free Cash Flow which will be utilized for bringing down gross debt levels over the next 3 – 5 years.

B.N. Kalyani, Chairman & Managing Director.

STANDALONE FINANCIAL HIGHLIGHTS FY 2020

TABLE 1	<i>Particulars</i>	Rs. Million				
		Q4 FY20	Q3 FY20	Q4 FY19	FY 2020	FY 2019

REVIEW OF INDIA BUSINESS

➤ Automotive

FY20 was expected to be a year of growth, driven by expectation of pre-buy ahead of change in emission norms from BS IV to BS VI. This expectation was not misplaced given the experience in other geographies which have witnessed emission change.

However, the deterioration in the fundamentals of the economy through the year, led to a sharp decline in demand across both Passenger & Commercial Vehicles. The OEM's started to curtail production and focus on liquidating BS IV inventory in the system. The M&HCV sector was the most impacted. Full year production was down 47% as compared to FY2019. BFL's revenues from CV space in FY2020 declined by 53%.

The outlook for the domestic automotive sector in FY2021 is uncertain in the backdrop of Covid 19 impact on various factors which influences demand off-take. Any government intervention will go a long way in reviving sentiment.

In the passenger vehicle segment, the company continues to perform better than the underlying market. BFL's revenues from Passenger Vehicles declined by 4.6% as against an industry decline of 15% on back of new customer addition and increasing market share.

In the near term, it is difficult to predict the traction from the domestic automotive market while we are confident of increasing our content per vehicle in the medium to long term.

➤ Industrials

The industrial sectors we address (Construction & Mining, PSU including Defense & Power, engineering sector) have a significant linkage to government spending on infrastructure and defence. Clearly, the past 12 months have seen some slowdown in activity levels and the same is visible in our industrial business performance. Recent Government initiatives like the Sagarmala project, National Infrastructure Pipeline (NIP), opening up of coal mining, the space sector to private entities do provide a big fillip to the activity levels and also provide long term visibility. We expect the industrial space to remain subdued in the near term.

* Others include other operating income, sale of manufacturing scrap etc.

REVIEW OF INTERNATIONAL BUSINESS

➤ Automotive

The Class 8 truck market from CY 2016 to CY 2019 has grown from 228,347 units to 344,558 units, a CAGR of 14.7% on back of a strong economy and solid freight demand. As per ACT research, CY2020 was expected to be the start of a down cycle with volumes declining by 30% to around 240,000 units. However, post Covid19, the expectation now for CY2020 is a sharper decline of >50% to around 160,000.

The passenger vehicle segment continues its positive growth trajectory with the segmental revenues growing by 4% despite the lockdown towards the later part of the quarter. We expect the passenger vehicle business to contribute more going forward as we continue to expand our presence in this segment by increasing our product portfolio, moving up the value chain and adding new customers.

➤ **Industrial**

Over the past decade or so, we have worked hard at diversification of portfolio. This market and product expansion is helping in the current crisis.

The Oil & Gas industry in North America has been the most impacted sector because of the pandemic and the subsequent closure of economies across the globe. Drilling activities have come to a standstill and its impact on our business has been very adverse. The revenues from this segment from a peak of > Rs 1,000 crores in FY2019 is now down to < Rs 500 Crores and we expect it to come down further in FY2021. We are seeing stable demand in the high horsepower engine as well as construction & mining segments.

The pandemic has also severely impacted the aviation market with possibility of change in travel behavior going ahead. This has led to a sharp rise in cancellation of aviation OEM company order book. This will have an adverse impact on our Aerospace business for the existing products in the near term. However, we continue to make good progress in new customer penetration including a steady expansion of product portfolio. This will not only help us sustain period of low overall demand, but also create a solid platform for growth and potentially a platform for customer expansion. We are confident of registering YoY growth in this segment.

Additionally, we remain focused on developing and winning new products & pipeline including new customers in the Industrial segment – both in India and globally.

Total	4,896	6,353	9,626	26,502	37,258	-28.9%

➤ Overseas Operations

Performance of international subsidiaries have been sup-optimal and course correction measures were being implemented. These included major fixed cost reduction and re-aligning the product portfolio towards Aluminium forgings etc. There were signs that things were improving with losses reducing sequentially.

While most of the plants were closed in April 2020, subdued level of operations have resumed in May / Jun. However, Covid19 pandemic has caused a significant impact on demand across the European market. As per ACEA, PV & CV sales are down >40% till May 2020 as compared to the same period previous year. **In light of such severe demand drop, despite cost reduction initiatives and aid from various government to take care of partial wage cost, the overseas operations are expected to post a Cash loss of about EUR 5 million in Jan – Jun 2020.**

We are committed to our investments and growth plan for Aluminum business. However, in the current scenario, we are reevaluating the demand from our customers for the Aluminium forging business in North America and are planning our capacity expansion accordingly. We are also looking at possibility of utilizing the existing capacity in Europe to address the immediate demand requirements.
