Highlights

Internal threats to the data and balance between People, Process & Technology is important.

Your Hobbies
Reading – Stephen Covey is my favourite, Nature, Old Hindi Songs/Classical and Driving.

Your Favourite Holiday
Beaches, Mountains and Forrest. Just aligning with nature along with my family. We are a crazy team.

Your Role Model
People who inspire to "Choose What is Right than What is Convenient".

requires Mobile Device Management to address related threats. Centralized log analysis will help in monitoring and managing networks.

A network threat that CISOs should give more attention to
Internal threats to the data and balance between People, Process & Technology need more attention from CISOs.

The best security architecture to protect enterprise networks
We refer to IT Risk Pyramid model developed by Westerman and R Hunter in which they found the risk factors related to availability, access, accuracy and agility form a hierarchy and the model architecture must consider these risks. The architecture should also deploy controls without affecting performance (both technology & user).

Your message to cybercriminals
Why this fight? Let's make a world better to Live.

Your achievements as a CISO
I have established a security process to go with a well designed technical architecture within Kalyani Group. Long back we achieved ISO 27001 certification and we are a mature company when it comes to security awareness. Recently we deployed Multi-Layered Security solution for a Multi-tenanted Data Center of Kalyani Group. This was a large project implementing best-of-breed security technologies.

A technology that will see more adaption in securing networks
According to me DLP in combination with Encryption will see more adoption. BYOD
